# Introduction and methodology

## The Course Catalogue

A common catalogue of available English courses across STARS EU partner universities is an important tool for the alliance as it enhances collaboration, accessibility, internationalization while connecting the higher education institutions and their students within the alliance.

The catalogue will facilitate student mobility by promoting courses in English, the dominant language in global academia, and by allowing students from partner institutions to easily identify and access these courses. This increases the participation of students and simplifies the course selection process.

The catalogue promotes transparency in course contents, credit allocation and assessment methods, making it easier for students to navigate training offerings across the alliance.

## Methodology

The STARS EU partner institutions worked collaboratively on the English courses catalogue. The representative for each university listed every English course available at their home university, along with information about the academic field of the course or the school/institute which offers it, and a weblink which allows viewers to get more information about the course that interests them.

The STARS EU partner institutions then pooled all this information in a spreadsheet, the catalogue, which has one tab per partner institution.
